In the Claims

1-4. (cancelled)

5. (currently amended) The [[oral dosage form]] capsule according to claim [[4]] 21 wherein the filler is a solid.

6. (currently amended) The [[oral dosage form]] capsule according to claim [[4]] 21 wherein the filler is a semi-solid.

7. (cancelled)

8. (currently amended) The [[oral dosage form]] capsule according to claim [[1]] 21 wherein the digestible [[substance]] filler is a binder.

9-11. (cancelled)

12. (currently amended) The [[oral dosage form]] capsule according to claim [[10]] 21 wherein the capsule has indicia thereon to indicate the [[first end]] second portion of the capsule.

13-17. (cancelled)

18. (currently amended) A capsule [[An oral dosage form]] for ingestion with liquid, comprising:

a first portion having an interior;

a second portion attached to the first portion, the second portion having an interior;

an active ingredient within the interior of the first portion;
and;

[[an inactive ingredient; and]]

a digestible filler [[substance]] within the interior of the second portion, the digestible filler having a predetermined weight that effects an increase in the density of the capsule [[oral dosage form]] to at least 1.0 g/ml, the amount and concentration of the filler being such as to eliminate formation of regions within the interior of the capsule that are relatively low density with respect to the liquid with which the capsule is swallowed.

19. (cancelled)

20. (currently amended) The ~~[[oral dosage form]]~~ capsule according to claim ~~[[19]]~~ 21 wherein the percentage of the total weight of the ~~[[oral dosage form]]~~ capsule that is due to the weight of the digestible ~~[[substance]]~~ filler is between about 15% and 80%.

21. (currently amended) A capsule ~~[[An oral dosage form]]~~ configured to be swallowed in whole with a liquid, comprising:

~~[[a capsule having]] a first portion having an interior and a second portion attached to the first portion, each portion having an interior;~~

a second portion attached to the first portion, the second portion having an interior;

an active ingredient concentrated in the interior of the first portion; and

a predetermined amount of digestible filler concentrated in the interior of the second portion of the capsule, the filler being chosen from the group sucrose, dextrose,

lactose, fructose, microcrystalline cellulose, sorbitol, xylitol, isomalt, gelatin and starch, the digestible filler having a predetermined weight that increases the density of the capsule to a predetermined density that effects sinking of at least the second portion of the capsule below the surface of the liquid, the amount and concentration of the digestible filler being such as to eliminate formation of regions within the interior of the second portion that are relatively low density with respect to the liquid with which the capsule is swallowed;

wherein the percentage of the total weight of the capsule that is due to the weight of the digestible filler is between about 5% and 95% and wherein the amount and concentration of the digestible filler in the interior of the second portion significantly reduce the buoyancy of the capsule so as to cause at least the second portion of the capsule to sink below the surface of the liquid.

22. (currently amended) The capsule [[oral dosage form]] according to claim 21 wherein the first portion of the capsule comprises a body portion of the capsule and the second portion comprises a cap portion of the capsule.

23. (currently amended) The capsule [[oral dosage form]] according to claim 21 wherein the predetermined weight and concentration of the digestible filler [[in the second portion]] produces a density of the second portion that is at least 1.0 g/ml.

24. (currently amended) A capsule [[An oral dosage form]] configured to be swallowed in whole with a liquid, comprising:

a body portion having an opening and an interior;

an active ingredient concentrated in the interior of the body portion;

ingredients disposed in the interior of the body portion;

[[and]]

a plug portion attached to the body portion so as to seal the opening, the plug portion comprising a predetermined amount of digestible filler; and

wherein the percentage of the total weight of the [[oral dosage form]] capsule that is due to the weight of the

digestible filler is between about 5% and 95% and wherein the amount and concentration of the digestible filler significantly reduce the buoyancy of the [[oral dosage form]] capsule so as to cause a significant portion of the [[oral dosage form]] capsule to sink below the surface of the liquid.

25-36. (cancelled)

37. (new) The capsule according to claim 21 wherein the first portion of the capsule comprises a cap portion of the capsule and the second portion comprises a body portion of the capsule.
